### On-Scene Incident Investigation Workshop

#### Objectives

While many companies invest heavily in Cause & Effect Analysis tools and training, few provide their employees with training in on-scene evidence gathering and data acquisition, yet rely on them to provide the foundational inputs to the entire investigative effort.

The objective of this one day training class is to provide sufficient knowledge to enable employees to collect comprehensive and high-fidelity information on which a quality investigation can be based, and ultimately relevant and effective corrective actions implemented.

With its modular design, On-Scene Incident Investigation training may be delivered as a stand-alone workshop, in conjunction with vPSI Simple Incident Analytics training, or integrated with clients' preferred Cause & Effect Analysis training.

#### Who Should Attend

This training workshop is designed for front-line personnel likely to be on location when an unplanned event occurs. Personnel at all levels of the organization would benefit from this training. Attendees can include line management, supervisors, and HSEQ personnel. In addition, anyone who reports or investigates unplanned events (such as Accidents, Near Misses, and Incidents) and those who develop or implement corrective actions would find value in this course.

#### Prerequisite

None

#### Customization

This course can be customized with clients' own material for in-house training.

#### Cost

Maximum 12 trainees per class. Call or email for pricing.
